Checklist to Assess New Quality Measure Statement

Торіс	Checklist Item	Concerns?	Comments Related to Concerns
Face Validity	Does the measure have face validity in terms of assessing the construct of interest? Has the right data source been selected? Is recall bias a concern?		Increase % pediatric patients with documented transition plan from xx to yy
Discriminant Validity	Does the measure discriminate between poor and excellent quality care? Is it too easy or too difficult to pass the measure?		
Ambiguous terms	Are ambiguous terms used in the measure statement? Can those terms be made more specific?		Operational definition for what is essential to qualify as a documented "plan" Is this the most meaningful to the patient?
Data source	Does the wording of the measure fit the planned data source?		Discrete field available for data mapping?
Time windows	If relevant, are time windows defined for denominator? For numerator?		Each month, quarter, year
Identifying denominator	Are there potential challenges in identifying the sample for the denominator		
Identifying numerator	Are there potential challenges in identifying numerator events/actions?		
Multiple actions	If multiple actions are required to pass an measure, should all elements have to be satisfied (all or none scoring) or should the individual elements be scored separately?		
Multiple events	If an eligible event/action occurs multiple times for one patient, how many times will you assess the event/action?
